## Metadek Mezzanine Floors

## Product Information

No matter what business you are in, the ability to expand to meet changing circumstances gives you a considerable advantage, but if this means relocating to new premises you will incur additional overheads directly affecting your overheads. Building costs or increased rent, an increase in rates, the disruption caused by moving plant and equipment not to mention stock and personnel all contribute to the viability of a mezzanine floor solution.

If your building has a concrete base with a minimum headroom of approximately 4.2M then do not think about moving out - think about moving up. A Metadek Mezzanine Floor can add to your storage capacity, increase office accommodation or release valuable space for storage or administration areas.

Metadek Mezzanine and Rack Supported Floors are bespoke constructions. Every installation is designed in collaboration with you, the client. Floor types and finishes, a choice of stairtreads, access options and ancillary equipment all combine to provide a tailor made solution specifically for you.

Metadek Rack Supported Floors can be constructed using Metabolt, QB2 or Widespan shelving as the support system.

Mezzanine & Rack Supported Floors are governed by Building and Fire Regulations. Applications must be made to your Local Authority and approved before any installation can commence. As part of our complete service, **metalraxstorage** will make all applications on your behalf, including the production of drawings and structural calculations, to ensure compliance with all relevant legislation.

As an ISO 9001 accredited company and a founder member of the Storage Equipment Manufacturers Association (S.E.M.A.) **metalraxstorage** promote and adhere to the design standards set out in the Association's Interim Codes of Practice.
